

Expense Tracker

Sathvika Iyengar

Overview and Approach

- Goal: Create a simple Expense Tracker with an interactive UI and organized data management
- *For keeping track of expense data: SQL Database*
 - expenses.db (id, description, amount, category, date)
- *For managing queries between Frontend and Database: Python/Flask*
- *For a dynamic and scalable UI: Angular*

App Design

Expense Tracker

Total Expenses: \$1302.80

Category Expenses

Misc
\$120.00

Transport
\$662.50

Food
\$134.50

Utilities
\$220.25

Beauty
\$120.00

Entertainment
\$45.55

Transactions

Description	Category	Date	Amount
Stationary Haul	Misc	2025-06-30	\$15
Bus Ticket	Transport	2025-05-02	\$2.5
Groceries	Food	2025-05-13	\$50
Gas Bill	Utilities	2025-06-22	\$200
Groceries	Food	2025-05-20	\$30

Items per page: 5 1 – 5 of 17

|< < > >|

Stacked percentage bar to show each Category's contribution

Transport: 50.9%

View trends in Expenses via line charts

View Trends

+ Add Expense

Add an Expense

Interactable table displaying all Expenses

Instantaneous updates to the Expense Total

View total Expenses by Category

Feature Popups

Add an Expense by providing a description, amount, category, and date

Description*

Amount*

0

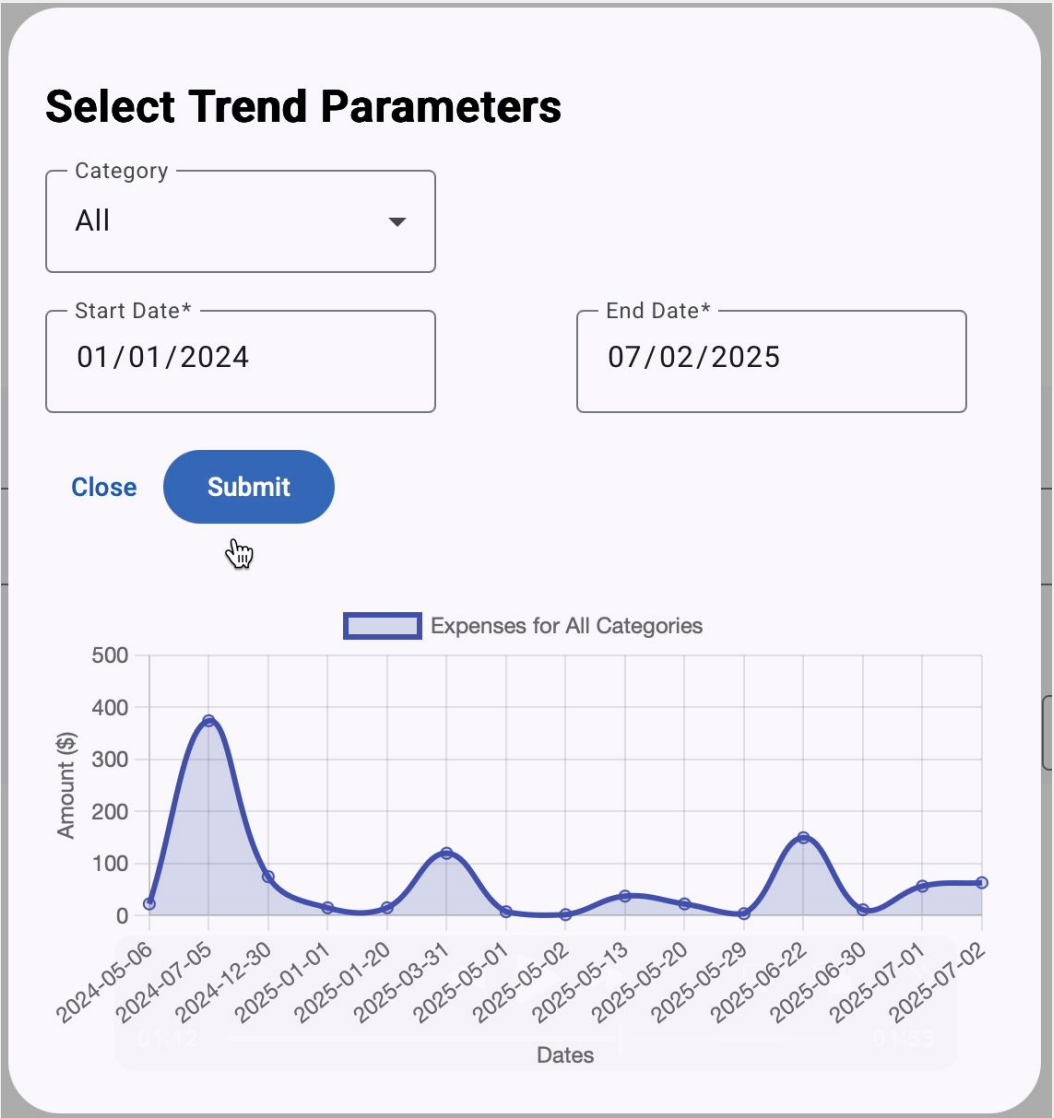

Category*

Date*

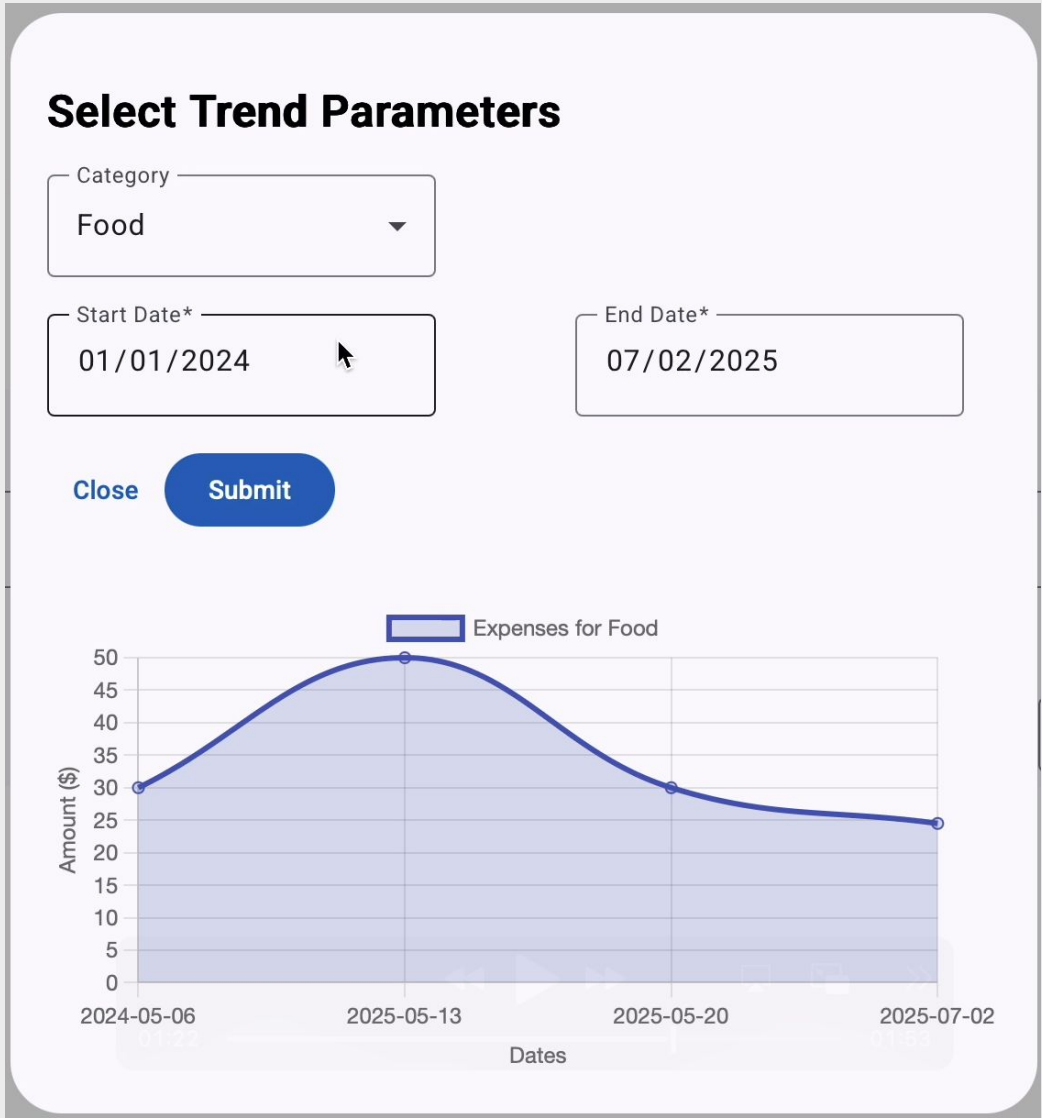

07/02/2025

Add Expense

View trends for all Expenses over a specific time range

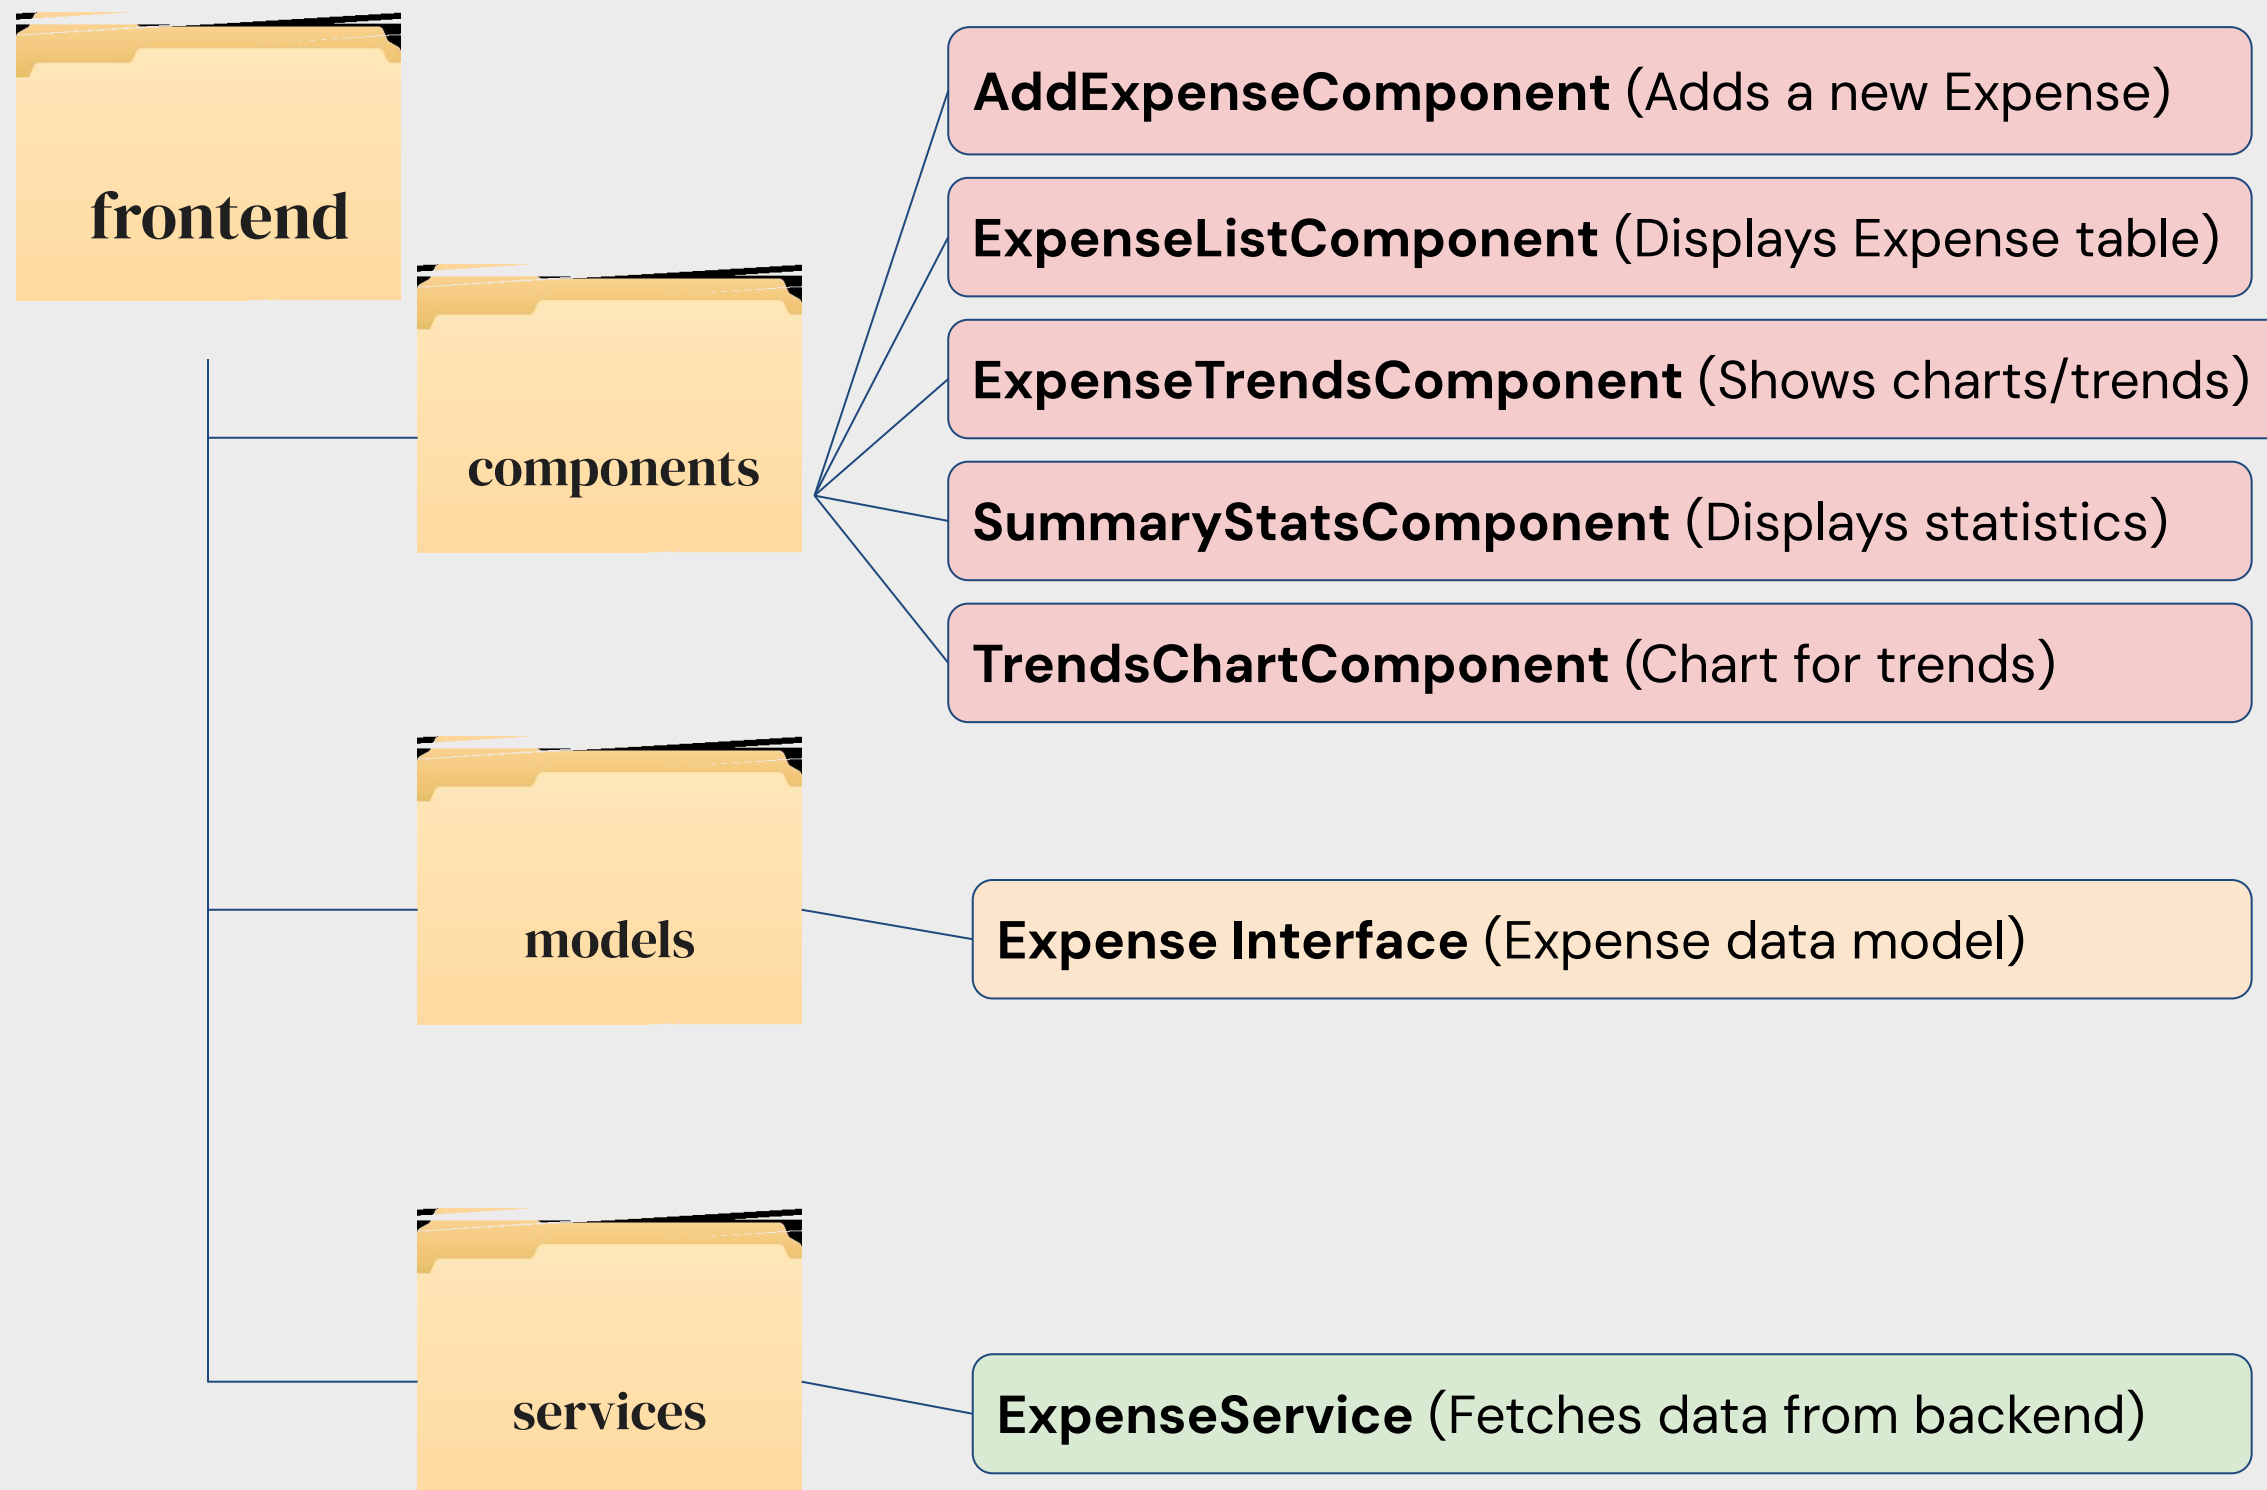

Or view trends for a specific category and time range

Installation/Run Directions

This application consists of an Angular frontend a Python/Flask backend to be run in separate terminals.

To run the ***Angular front end***:

- > cd frontend/expense-tracker
- > npm install
- > cd src/app
- > ng serve

To run the ***Python backend***:

- > cd backend
- > python app.py

Some package installations may be required via >
pip install -r requirements.txt

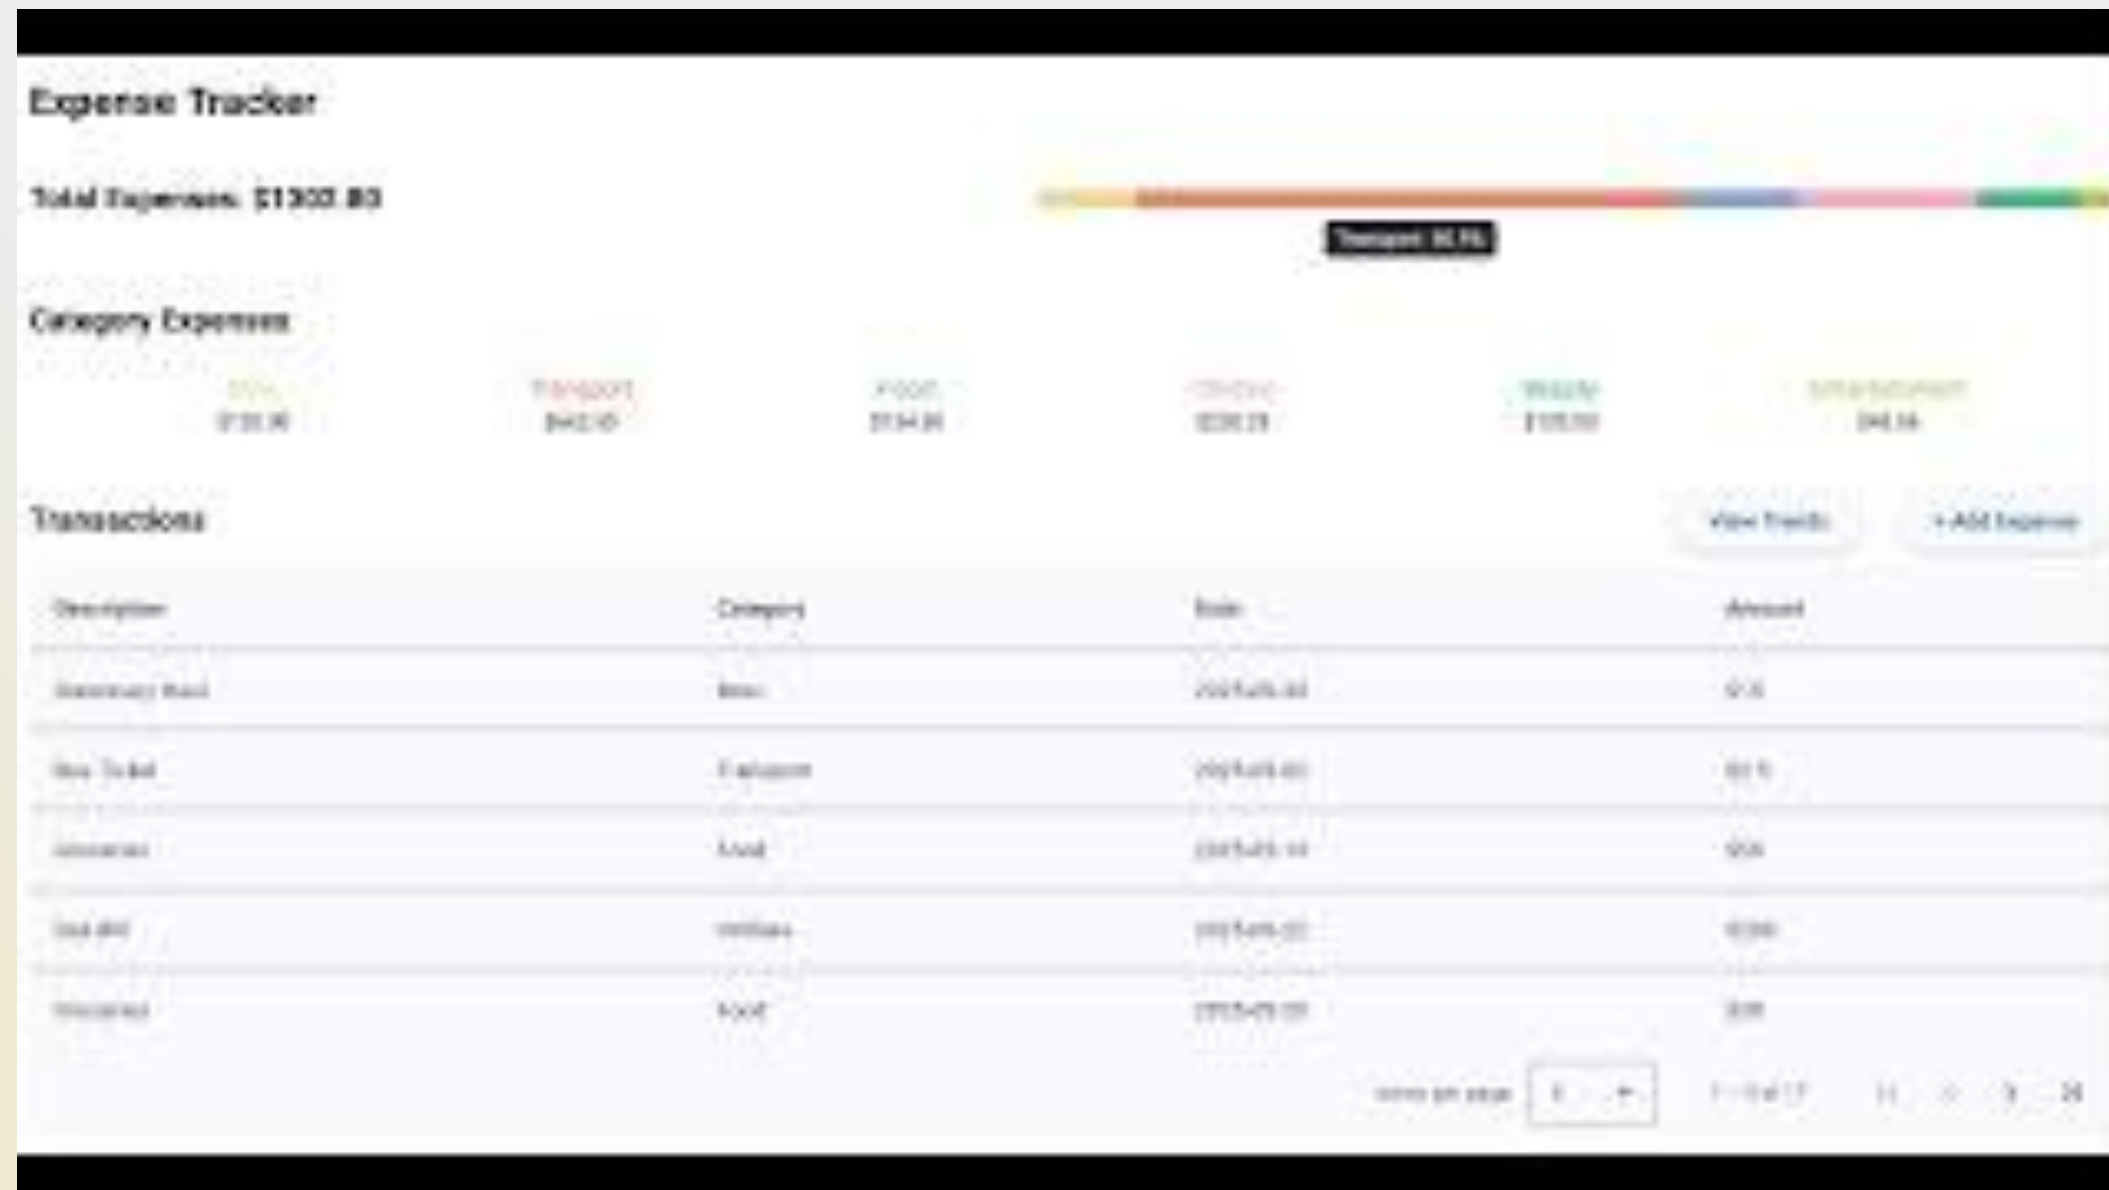

For virtual environment:

- > python3 -m venv env
- > source env/bin/activate
- > python app.py

6

This information is also available in the project's README.

Possible Next Steps

- Advanced table operations
- NGRX state management
- Natural Language querying of data
- Custom data upload
